Application No. 10/564,674

Paper Dated: November 18, 2009

In Reply to USPTO Correspondence of August 18, 2009

Attorney Docket No. 0470-060131

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the

application.

Listing of Claims

Claims 1-7 (Cancelled).

Claim 8 (Currently Amended): A material for cartilage-like material substitution,

comprising a fibre-reinforced polymerized hydrogel, wherein said polymerized hydrogel

contains 10-70% (m/m) swellable fibres (based on the dry matter), wherein the length of the

fibres is at least a millimeter, and wherein 1-5% (m/m) (based on the dry matter) of a substance

that contains ionized groups has been added to said polymerized hydrogel and, wherein said

swellable fibres have sucked up at least one monomer solution prior to polymerization of the

hydrogel.

Claim 9 (Currently Amended): The material for cartilage-like material

substitution according to claim 8, wherein said hydrogel comprises monomer solution is a

hydroxyethyl methacrylate (HEMA) polymer.

Claim 10 (Previously Presented): The material for cartilage-like material

substitution according to claim 8, wherein said substance containing ionized groups comprises

methacrylic acid.

Claim 11 (Previously Presented): The material for cartilage-like material

substitution according to claim 10, comprising 1-5% (m/m) methacrylate.

Claim 12 (Currently Amended): The material for cartilage-like material

substitution according to claim 8, wherein said swellable fibres comprise fibres saturated in a

liquid.

Attorney Docket No. 0470-060131

Claim 13 (Currently Amended): The material for cartilage-like material substitution according to claim 8, wherein said swellable fibres comprise fibres a polyurethane material.

Claim 14 (Previously Presented): A prosthesis fabricated of the material for cartilage-like material substitution of claim 8.

Claim 15 (New): A material for cartilage-like material substitution, comprising a fibre-reinforced polymerized hydrogel, wherein said polymerized hydrogel contains 10-70% (m/m) swellable fibres (based on the dry matter), wherein the length of the fibres is at least a millimeter, and wherein 1-5% (m/m) (based on the dry matter) of a substance that contains ionized groups has been added to said polymerized hydrogel and, wherein said swellable fibres comprise at least one monomer solution.
